All Measurements in mm

Step 1

Remove the existing tek screws from the top of the fence.

Step 2

Install the joiners to the front and back of your current fence post. Do this for both sides.

Step 3

Replace the tek screw back onto the existing fence and slide on the extension post. Screw in place with tek screws. Do this for both sides.

Step 1 to 3

Step 4

Slide in Panel infill ensuring that the side with the larger blank space is at the top. Please look for the panel with the sticker showing "THIS SIDE UP" to indicate the direction all panels should be. Screw panels on horizontal edge to the top of the existing fence rail.

To ensure your fence extensions (solid only) are installed correctly for pool safety regulations compliance, please refer to the diagram below

Step 5

Insert the top rail. Screw the top rail to the INFILL panel using tek screws.

Step 6

Now that the structure is fastened together, grasp the top rail at the axis with the post and firmly lift slightly to eliminate rattle space. Screw the rail to the post whilst maintaining this tension. Do the same on both ends.
